Q1. What is RoadSure?

Answer: RoadSure is a road-insurance platform for managing road projects, construction progress, inspections, risk assessments, insurance policies, claims, settlements, payments, and notifications.

Q2. Who can use RoadSure?

Answer: The platform supports Road Authority Project Managers, Contractor Project Managers, Inspectors, Underwriters, Claims Adjusters, and Administrators. Access depends on the user's assigned role.

Q3. How do I sign in?

Answer: Enter your registered login credentials. When authentication succeeds, the system generates a JWT used to access authorized features.

Q4. What happens if I log out?

Answer: Logging out ends the authenticated session.

Q5. Can I update my profile?

Answer: Yes. An authenticated user can update their profile information. The system generates a notification after the update.

Q6. What can a Road Authority Project Manager do?

Answer: The Road Authority Project Manager can create and manage road projects, view project details and progress, and review and approve or reject inspections.

Q7. What can a Contractor Project Manager do?

Answer: The Contractor Project Manager can access assigned projects, submit construction details, and record construction progress updates.

Q8. What does an Inspector do?

Answer: An Inspector records initial, periodic, and final inspections, documents inspection results, reports defects, and verifies corrective actions.

Q9. What does an Underwriter do?

Answer: An Underwriter evaluates project risk, reviews risk assessments, considers recommended premiums and coverage, and manages policy proposals and policies.

Q10. What does a Claims Adjuster do?

Answer: A Claims Adjuster reviews submitted claims, assesses damage, records severity and policy-violation findings, recommends a settlement, and approves or rejects claims.

Q11. What does an Administrator do?

Answer: An Administrator can view platform users, organizations, projects, policies, claims, payments, and notifications.

Q12. How is a road project created?

Answer: An authorized Road Authority Project Manager enters the project information. The project is created with the CREATED status, and a notification is generated.

Q13. How can I view road project information?

Answer: Authorized users can view accessible projects and open a project's details, including construction details and progress history.

Q14. How are construction details submitted?

Answer: The Contractor Project Manager submits the construction details for the relevant project. The platform records the details and can notify relevant users.

Q15. How is construction progress tracked?

Answer: Progress is recorded as updates against a project, allowing authorized users to review the project's progress history.

Q16. What inspection types are supported?

Answer: The platform supports initial, periodic, and final inspections.

Q17. What happens when an inspection is approved?

Answer: The inspection is marked approved, the relevant project status may be updated according to the workflow, and a notification is generated.

Q18. What happens when an inspection is rejected?

Answer: The inspection is rejected, the project is moved to REWORK_REQUIRED, and a notification is generated.

Q19. How are defects handled?

Answer: An Inspector can record a defect found during an inspection. Corrective action can then be submitted and verified to address the defect.

Q20. What does corrective-action verification mean?

Answer: It records whether the action taken to address a reported defect has been verified.

Q21. How is project risk assessed?

Answer: The Underwriter creates a risk assessment using project and road-quality information. The assessment records risk results and can recommend coverage and a premium.

Q22. How is an insurance proposal handled?

Answer: A policy proposal is generated from the risk-assessment process. When the proposal is accepted, the system creates a policy, records the premium payment, and generates a notification.

Q23. Where can I find policy information?

Answer: Authorized users can view available policies and relevant policy details through the platform.

Q24. How does a Claims Adjuster find claims to review?

Answer: The Claims Adjuster opens the claims list to retrieve submitted claims available for assessment.

Q25. What should be recorded during a claim assessment?

Answer: Record the damage category and damage percentage, inspect the site where applicable, check for policy violations, determine the severity level, and assess the damage against the policy coverage.

Q26. How is a recommended claim settlement determined?

Answer: The system workflow calls for a recommended settlement based on policy coverage and the damage assessment, including the severity finding. The recommendation should follow the project's configured rules and available evidence.

Q27. What happens after a claim is assessed?

Answer: The claim moves to UNDER_ASSESSMENT and a notification is generated. The assessment information is available in the claim summary.

Q28. What happens when a claim is approved?

Answer: The system creates a settlement, triggers settlement payment, marks the settlement PAID, marks the claim SETTLED, and generates a notification.

Q29. What happens when a claim is rejected?

Answer: The Claims Adjuster rejects the claim with a reason. The claim status changes to REJECTED and a notification is generated.

Q30. How can I review claim history and notifications?

Answer: A user with access can view a claim summary containing claim, assessment, settlement, and history information; view the latest claim summary for a project; retrieve claim-related notifications; and mark one or all notifications as read.
